

ANNUAL REPORT F.Y 2014-15

President's Message

Greetings to you all!

This year saw many highs and a couple of lows.

Among the successes, one can list the hard work put in by two GREAT Foundation teachers in a government school to teach Science and Maths and help all the Std X students to pass the SSC exam. This was an achievement as the students were taking the SSC exam for the first time and their scoring 100% results was a morale booster for the school, the students and the teachers. Our Computer teachers also did a good job in introducing syllabus - based digital learning to the students of three schools. Some of the students ended up making beautiful PPTs in their subjects.

The other achievements were:

- (i) Setting up innovative Science LIFE LABs in 10 schools training 35 Science Teachers in experiential learning methods of teaching and providing syllabus-based Science Kits made out of trash to over 5000 children to perform experiments and learn scientific concepts.
- (ii) Supporting an engineering student financially in college till he completed the Computer Science Engineering degree course from D.Y. Patil College of Engineering. He passed out with a First Class and is now employed with Mind Scrub Technologies a software company in Pune.
- (iii) Supporting a girl student in college for her diploma course in Computer Science Engineering. Having cleared the course with distinction she has enrolled for the second year degree course in Computer Science engineering in Parvatibai Genba Moze College of Engineering, Pune.
- (iv) Supporting a second girl student in college who has now has passed MA (Hindi) with 78% with a position in the university. She is now studying for NET.

The low side was finding lack of adequate response for our Employability Skills program which had run well for two years and inability to start a model English School for reasons beyond our control.
